## Improving the circular economy model for collection and processing of fibre-reinforced composites with GEES Recycling solution

20/05/2025,

Tiziana Perin and Franco Mioni

# Hook - Problem

-  **Growing amount of composite fiber-reinforced (CFR) waste**
  - Originating from sectors like sports, marine, automotive, and construction.
-  **Lack of structured systems for CFR recovery and recycling**
  - CFR materials are not easily recyclable with standard technologies.
-  **Unsustainable disposal practices**
  - CFR waste often ends up in landfills or incinerators, harming the environment.
-  **Limited reintegration of recycled materials into the market**
  - There are few real-life examples of circular use of recycled CFR products.
-  **No shared guidelines for public bodies and companies**
  - There's a gap in clear protocols for collection, treatment, and procurement of recycled products.
